Background	The protein encoded by this gene belongs to the
	serpin family. It is predominantly expressed in the
	liver and secreted in plasma. It inhibits the activity of
	coagulation factors Xa and XIa in the presence of
	protein Z, calcium and phospholipid. Mutations in
	this gene are associated with venous thrombosis.
	Alternatively spliced transcript variants have been
	found for this gene.[provided by RefSeq, May 2010],
