Alternative Names	
Background	This gene is a member of the Jumonji domain 2
	(JMJD2) family. The encoded protein is a
	trimethylation-specific demethylase, and converts
	specific trimethylated histone residues to the
	dimethylated form. This enzymatic action regulates
	gene expression and chromosome segregation.
	Chromosomal aberrations and changes in
	expression of this gene may be found in tumor cells. Alternative splicing results in multiple transcript
