

FoxO3a (phospho-Ser318/321) rabbit pAb

Cat No.:ES16338

For research use only

Overview

Product Name	FoxO3a (phospho-Ser318/321) rabbit pAb
Host species	Rabbit
Applications	WB
Species Cross-Reactivity	Human;Mouse;Rat
Recommended dilutions	WB 1:1000-2000
Immunogen	Synthesized phospho peptide around human FoxO3a (Ser318 and 321)
Specificity	This antibody detects endogenous levels of Human Mouse Rat FoxO3a (phospho-Ser318 or 321)
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Storage	Store at -20°C. Avoid repeated freeze-thaw cycles.
Protein Name	FoxO3a (Ser318/321)
Gene Name	FOXO3 FKHL1 FOXO3A
Cellular localization	Cytoplasm, cytosol . Nucleus . Mitochondrion matrix . Mitochondrion outer membrane ; Peripheral membrane protein ; Cytoplasmic side . Retention in the cytoplasm contributes to its inactivation (PubMed:10102273, PubMed:15084260, PubMed:16751106). Translocates to the nucleus upon oxidative stress and in the absence of survival factors (PubMed:10102273, PubMed:16751106). Translocates from the cytosol to the nucleus following dephosphorylation in response to autophagy-inducing stimuli (By similarity). Translocates in a AMPK-dependent manner into the mitochondrion in response to metabolic stress (PubMed:23283301, PubMed:29445193). Serum deprivation increases localization to the nucleus, leading to activate expression of SOX9 and subsequent chondrogenesis (By similarity). .
Purification	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using

ELK Biotechnology

Clonality	epitope-specific immunogen. Polyclonal
Concentration	1 mg/ml
Observed band	90kD
Human Gene ID	2309
Human Swiss-Prot Number	O43524
Alternative Names	Forkhead box protein O3 (AF6q21 protein) (Forkhead in rhabdomyosarcoma-like 1)
Background	This gene belongs to the forkhead family of transcription factors which are characterized by a distinct forkhead domain. This gene likely functions as a trigger for apoptosis through expression of genes necessary for cell death. Translocation of this gene with the MLL gene is associated with secondary acute leukemia. Alternatively spliced transcript variants encoding the same protein have been observed. [provided by RefSeq, Jul 2008],
