Human Gene ID 347517 Human Swiss-Prot Number Q5JT25

Alternative Names RAB41; Ras-related protein Rab-41

**Background** This gene encodes a small GTP-binding protein that

belongs to the largest family within the Ras

superfamily. These proteins function as regulators of membrane trafficking. They cycle between inactive GDP-bound and activated GTP-bound states, which is controlled by GTP hydrolysis-activating proteins

(GAPs). This family member can be activated by the GAP protein RN-Tre, and it is localized to the Golgi complex. [provided by RefSeq, May 2010],
